

LOGAN THOMAS

PERSONAL INFORMATION

loganipad@gmail.com, +1 562-343-3990, loganhthomas.com

Long Beach, California, 90802

PROFILE

Full-stack developer building production-ready web applications with React, Node.js, and FastAPI. Proficient in JavaScript, Python, C++, and SQL, with experience in REST APIs, MySQL, MongoDB, and Supabase. Experienced across the full development lifecycle, using Git, Vercel, Auth0, and Stripe.

EDUCATION

Bachelor of Science in Computer Science

Aug 2023 - May 2026

California State Polytechnic University, Humboldt, (GPA: 3.1)

EMPLOYMENT

Independent Full-Stack Developer

Jun 2024 - Present

Self-directed development of production web applications (SaaS & consumer)

- Built and deployed end-to-end web applications using React, Node.js, and Supabase; hosted on Vercel, owning frontend, backend, and deployment pipelines
- Implemented secure authentication and authorization flows using Auth0 (OAuth) and integrated Stripe payments to support subscriptions and one-time transactions
- Designed and implemented RESTful APIs and data models across MySQL and MongoDB, optimizing data access patterns for application performance and scalability
- Owned the full development lifecycle—from system design and architecture decisions to production deployment, monitoring, and iterative feature delivery

PROJECTS

Founder, **budy.study** — Study Collaboration Platform

- Architected and launched a real-time collaboration platform with chat and group channels using React, Node.js, and WebSockets.
- Designed a secure, scalable backend with Supabase and Auth0 supporting role-based access and persistent study groups.
- Owned full product lifecycle as an independent full-stack developer, from UX design to deployment.

AI-Based Personalized Learning Platform (Capstone Project)

- Built a TensorFlow recommendation model that adapts learning content based on user performance and engagement.
- Developed a FastAPI microservice and React analytics dashboard for real-time progress tracking and model insights.
- Implemented monitoring to evaluate model accuracy and user outcomes over time.

Northcoast Mapping App – 2nd Place, Cal Poly Humboldt Hackathon

- Built a full-stack geospatial mapping tool with filtering, CRUD, and interactive data layers.
- Delivered a working prototype in 24 hours and presented to judges; earned 2nd place among 10 teams.
- Optimized map rendering and data queries for fast, responsive interaction.
